

GemFire Reseller Services

Authorized Reseller

ObjectWave Corporation is an authorized Reseller of GemStone's GemFire® Software Products. [GemFire Reseller Services About GemFire](#)

GemFire Enterprise 5.0 is a high-performance, distributed data caching platform that serves as the core component of the GemFire Enterprise Data Fabric . It supports multiple topologies that allow it to be easily embedded into application architectures such as J2EE, .NET, Grid, SOA and portals and provide extremely high performance throughput, and scalability. Proven in mission-critical programs in financial services, telecommunications, energy, logistics and federal programs, GemFire Enterprise is built on one of the industry's fastest and most reliable data distribution and caching systems. [Read more about GemFire Enterprise 5.0](#)Why do you need GemFire Enterprise Data Fabric?

As organizations aim to streamline their business processes through IT initiatives such as Service-oriented architectures (SOA), Grid computing and Event-driven architectures (EDA), the following key data management challenges need to be addressed:

- Providing reliable and high speed access to data
- Virtualizing information from many sources and delivering it to distributed users and applications
- Scaling to increasing volumes of data and events
- Dealing with static data as well as "data in motion" or dynamic data

So, if you need scalability and to reliably share and distribute data and events across networks, then you need GemFire Enterprise Data Fabric. Visit our [Document Library section](#) to find technical white papers and other material related to GemFire Products.[Our Services](#)
